### **Project 5 Critters 2 Team Plan**

Github URL: <https://github.com/soniakt23/assignment5>

We began the project by meeting together for a few hours where Mary began upgrading the controller with the use of SceneBuilder and Sonia began upgrading the display. We then continued working on these parts separately at home with some online discussion. Both of us contributed to the look function online at home as well. Finally, we met again for about 6 hours to tie these parts together, debug, and work on the animation functionality using the paired programming method.
